While the history of European ompetition motorcycles has been largely dominated by Italian, British, and German marques, other builders around the continent have also played significant roles from the turn of the century to present. Arranged by nation, this book examines more than two dozen important marques, including Bultaco, CZ, Elf, Husqvarna, KTM, Ossa, Peugeot, and many others. A wealth of rare photography, including a special color section, includes candid shots of the top personalities and the bikes both at rest and at speed.

This is a high quality facsimile of "ABC of the Motorcycle" by W. J. Jackman, originally published in 1916.The man who expects to find in this book a technical or theoretical discussion of the motorcycle and its mechanism will be disappointed. It has been written solely for the guidance of those who know they don't know much, if anything, about the subject, and wish to start right in advising themselves about it. With this purpose in view the language used is intentionally devoid of technicalities and readily understandable. The book is what may well be termed a "show how" one.Step by step, in rational order, the various parts of the machine are taken up and their functions explained until these parts are assembled in the completed machine, and their unity of action thus demonstrated. First, we have the generation of the fuel which supplies the motive power; next, the manner in which the force created by this fuel is utilized; then, the part taken by the motor or engine in communicating this energy to the transmission system; and finally, the transmission itself. If the reader will give these various chapters careful consideration, comparing them as he goes along with the explanatory illustrations which accompany them, he will readily obtain a clear, comprehensive understanding, not only of the mechanism itself, but of the principle upon which it is based. This information, once thoroughly absorbed, will enable the rider of a motorcycle to get more satisfactory service from his machine, increase his pleasure in using it, avoid a lot of trouble in its operation, and enable him to overcome many annoying things which, under other circumstances, would require the attention of an expensive expert.

The ultimate reference for Triumph lovers and fans of British motorcycles, The Complete Book of Classic and Modern Triumph Motorcycles 1937-Today collects all of the motorcycles from this iconic brand in a single illustrated volume. In this revised and updated edition, you'll find the all-new Bonneville lineup introduced for the 2016 model year as well as other Triumphs through 2019. Originally formed as a bicycle company in 1885, Triumph produced its first motorcycle in 1902, which was simply a bicycle fitted with a Belgian Minerva engine. From there, the company, in various iterations, went on to build some of the most iconic motorcycles of all time. Written by respected Triumph expert Ian Falloon, this luxurious reference covers all of the major and minor models, with an emphasis on the most exemplary, era-defining motorcycles such as the Thunderbird, Tiger, Trophy, Bonneville, and new machines such as the Speed Triple, Thruxton, and Daytona 675. Detailed technical specifications are offered alongside compelling photography, much of it sourced from Triumph's archives. The Complete Book of Classic and Modern Triumph Motorcycles 1937-Today also features important non-production models and factory racing and speed-record-setting motorcycles that have become integral parts of Triumph's stellar reputation. This is a book no Triumph fan should be without!

A vital guide to the frontlines of our fight against climate change and the scientific and technological innovations that will revolutionize the world. The United States ' accelerated plans to combat the existential threat of climate change finally give reason to hope. In Our Livable World, research specialist and author Marc Schaus explores the incredible new green innovations in science and engineering that can allow us to avoid the worst repercussions of global warming as we work to usher in a sustainable, livable world. To beat a challenge the size of climate change, our solutions will have to be ambitious: solar thermal cells capable of storing energy long after the sun goes down, " smart highways " designed to charge your vehicle as you drive, indoor vertical farms automated to maximize crop growth with no pesticides, bioluminescent vines ready to one day replace our streetlights, jet fuel created from landfill trash—and next-generation carbon capture techniques to remove the emissions we have already released over the past several decades. Far from the geoengineering schemes of cli-fi action thrillers, real solutions are being developed, right this moment. Our Livable World features interviews with the innovators, real talk on the revolutionary technology, and a clear picture of a cleaner planet in the future. " An important book that shows the dawn of a new kind of environmental movement an age where we invest in deeply creative and fascinating technical solutions that work in harmony with the Earth. Marc Schaus lays out

the exciting future of environmental innovation before us." —Katie Patrick, author of How to Save the World
