As religious polarisation in society deepens, political actors and policy-makers have begun to struggle with questions on the role of the dominant religion and how religion influences constitutional commitments and development. By focusing on Indonesia, Malaysia and Sri Lanka, *Constitutions, Religion and Politics in Asia* demonstrates how constitution-making and the operation of constitutional arrangements involving religion cannot be separated from the broader political dynamics of society. Although constitutions establish legal and political structures of government institutions and provide tools for rights protection, they do not operate in a vacuum divorced from the games of power and the political realities surrounding them. Here, Shah sets out how constitutions operate and evolve and demonstrates how constitutional provisions can produce unintended consequences over time. A vital new source of scholarship for students and scholars of law and religion and comparative constitutional law, and those interested in issues of constitutionalism and legal and political history in Asia.

*Contextual Teaching and Learning* is an examination of a holistic approach to education. The book provides its readers with a comprehensive definition of Contextual Teaching and Learning (CTL), discussing its origins and philosophy, its basis in psychology, neuroscience, modern physics and biology. While attitudes toward education are often shaped by popular views in science, author Elaine B Johnson outlines the importance of integrating modern scientific discoveries into current education practices. *Contextual Teaching and Learning: What It Is and Why It's Here to Stay* stresses interdependence, differentiation, and self-organization as the principals that form CTL, as opposed to the dualism between thought and action that plagues traditional views on education. Elaine B Johnson illustrates the relationship between brain functions, memory retention, and teaching methods, and the significance of incorporating real life examples in lesson plans.

AECT Design & Development Outstanding Book Award for 2008! *Design and Development Research* thoroughly discusses methods and

strategies appropriate for conducting design and development research. Rich with examples and explanations, the book describes actual strategies that researchers have used to conduct two major types of design and development research: 1) product and tool research and 2) model research. Common challenges confronted by researchers in the field when planning and conducting a study are explored and procedural explanations are supported by a wide variety of examples taken from current literature. Samples of actual research tools are also presented. Important features in this volume include: concise checklists at the end of each chapter to give a clear summary of the steps involved in the various phases of a project; an examination of the critical types of information and data often gathered in studies, and unique procedures for collecting these data; examples of data collection instruments, as well as the use of technology in data collection; and a discussion of the process of extracting meaning from data and interpreting product and tool and model research findings. Design and Development Research is appropriate for both experienced researchers and those preparing to become researchers. It is intended for scholars interested in planning and conducting design and development research, and is intended to stimulate future thinking about methods, strategies, and issues related to the field.

Global value chains (GVCs) powered the surge of international trade after 1990 and now account for almost half of all trade. This shift enabled an unprecedented economic convergence: poor countries grew rapidly and began to catch up with richer countries. Since the 2008 global financial crisis, however, the growth of trade has been sluggish and the expansion of GVCs has stalled. Meanwhile, serious threats have emerged to the model of trade-led growth. New technologies could draw production closer to the consumer and reduce the demand for labor. And trade conflicts among large countries could lead to a retrenchment or a segmentation of GVCs. World Development Report 2020: Trading for Development in the Age of Global Value Chains examines whether there is still a path to development through GVCs and trade. It concludes that technological change is, at this stage, more a boon than a curse. GVCs can continue to boost growth, create better jobs, and reduce poverty provided that developing countries implement deeper reforms to promote GVC participation; industrial countries pursue open, predictable policies; and all countries revive multilateral cooperation.
