The second edition of this sourcebook brings together a comprehensive selection of the principal international, European and domestic sources of environmental law, together with commentary and extensive references to secondary sources (including relevant websites). The new edition has been fully revised and extended to include the major developments in this rapidly evolving area of law. In particular, at the international level there is now consideration of the Kyoto Protocol 1997, the Aarhus Convention 1998, the Basel Protocol 1999 and the Biosafety Protocol 2000. At the European level, there is coverage of the changes introduced by the Amsterdam Treaty; the 2000 Water Framework Directive; the new Air Quality Directives; and the EC White Paper on Environmental Liability. There is also discussion of the proposed Sixth Environmental Action Programme. The domestic coverage includes consideration of the Pollution Prevention and Control Act 1999, the Countryside and Rights of Way Act 2000, the implementation of the contaminated land regime, together with coverage of the new UK waste strategy. The book now also includes extensive consideration of the impact of the Human Rights Act 1998 on environmental law. Recent case law is included throughout. This unique work will provide an extremely valuable resource for all those studying, teaching and working in the field of environmental law.

"Environmental Crime: A Sourcebook provides ideas, tools, and data to investigate environmental offenses. Burns and Lynch urge readers to recognize the availability of a wide array of data regarding environmental offenses and provide bibliographic tools to locate this data. They also provide data sets and examples of data available from the Environmental Protection Agency (EPA) and state agencies charged with enforcing environmental laws. Specific sections describe EPA resources, accessing and downloading EPA and other environmental law compliance and violation data, methods of compiling EPA data, actual environmental crime data sets, and research that can be performed using these data. Written in a non-technical manner, the book is designed to provide readers from all backgrounds with an understanding of environmental crime and the avenues by which it can be recognized and researched."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. The theoretical arguments for environmental taxes and other types of economic instruments for environmental protection have been discussed extensively in the literature. Rather less well discussed has been the extremely complex form that such instruments have in fact taken in practice. *Environmental Taxation Law: Policy, Contexts and Practice* examines the legal implications of introducing environmental taxes and other economic instruments into the regulatory framework of UK law. In doing so, it analyzes and explains the difficulties of grafting environmental taxes onto the complexities of existing regulatory structures, not all of which, of course, were originally devised with environmental considerations in mind. Although the focus of the book is the UK's pioneering implementation of a web of distinct yet interrelated policy measures, it locates the UK's taxes and instruments not simply in their broader context of market and environmental regulation, but also in the contexts of European and international law.

Offering a detailed account of the various legal arrangements at European Union level, this book is an ideal reference tool for practitioners and legal scholars. As well as examining the principal sources of EU environmental law enforcement, it also contributes to the legal and political debates that surround the subject. Spanning three parts, the author examines the practical impact of the legal arrangements at Union level that are used to uphold EU environmental norms. Offering a comprehensive account of the current state of EU environmental law enforcement and the developments affecting it, Martin Hedemann-Robinson explores the role of the European Commission, the possibilities for private law enforcement, and the responsibilities of member state national authorities. Key legal developments that have occurred since the first edition have been incorporated, including new statutory developments and case law. Particular attention is paid to the impact of the 2007 Lisbon Treaty on foundational EU treaty provisions enabling the European Commission to take legal action against EU member states infringing Union

environmental law, the establishment of a new legal architecture at Union level on the topic of environmental criminal policy, as well as increased EU legislative intervention in the area of environmental inspections. The impact of the 1998 Århus Convention on EU environmental law enforcement is also addressed in detail, including the influence of recommendations of the Århus Convention's Compliance Committee.

Comprehensively details the state of environmental law in the UK and the EU. The book provides a structured approach to the legal and regulatory controls aimed at protecting the environment and reflects changes in the law since the 2002 edition was published.
